ASSET MANAGER

Technology for your capital

Asset manager is the automated, fast and secure way to invest in the derivatives market in the United States.

The Asset manager portfolio is managed with artificial intelligence that makes decisions according to market behavior and risk tolerance.

# HOW DOES ASSET MANAGER'S ARTIFICIAL INTELLIGENCE WORK?

Asset manager's algorithm diversifies your portfolio, capitalizing on the best trades of the day in the world's leading derivatives market that has existed since 1848.

## OUR PATENTED TECHNOLOGY IS NOURISHED BY THE X OF TRADING

The correlation between assets is analyzed, to determine each order and increase the performance of the returns.

## WE HUNT FOR THE BEST OPPORTUNITIES

The algorithm analyzes past returns, price volatility, correlation with other assets, among other factors, to identify when financial resources are increasing or decreasing, and the probability that they will continue in an upward trend. The internal **Asset manager** algorithm increases the purchases designated for those assets, resulting in higher returns.

## PROPER TRANSACTION HANDLING

The **Asset manager** algorithm estimates the probability of an asset going down. If the price statistically seems to have peaked, **Asset manager** either sells the asset or reduces its share in the portfolio in a matter of milliseconds.

# KEY ADVANTAGES

## » HIGH RETURNS

Regardless of market conditions.

## » WITHDRAW AT ANY TIME

Withdraw funds whenever you want without restrictions or penalties.

## » DAILY COMPOUND INTEREST

Your interest accumulates every day.

## » RISK MANAGEMENT (LOW-RISK STRATEGY)
